

SchemaLogic provides meta-data management software that enables Life Sciences companies to effectively manage critical information

- ❖ Speed commercialization
- ❖ Accelerate product development
- ❖ Streamline business processes

Managing Metadata for Life Science Enterprises

- ❖ Optimize the performance and cost of corporate content management systems while improving findability and regulatory compliance
- ❖ Maximize revenues by streamlining clinical trial initiation processes and speeding time-to-market
- ❖ Accelerate research collaboration and information flows from discovery through clinical trials, drug approval, and product launch
- ❖ Bridge the gap between disconnected, disparate systems, enabling researchers and scientists to access information seamlessly, improve scientific and business productivity and collaboration, and transform bioscience data into medical and pharmaceutical insights

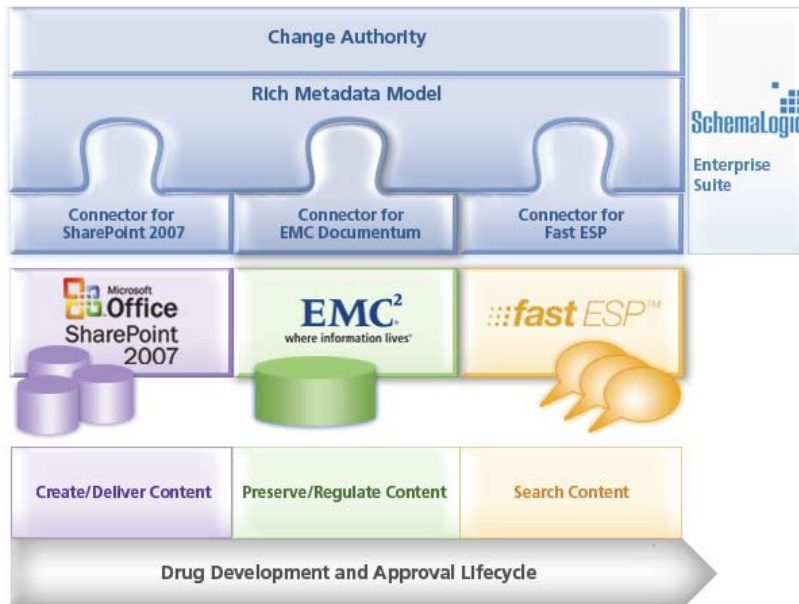

In the Life Sciences industry, information is the source of innovation. Vast varieties of content and information sources feed the development pipeline. The ability to create, share, navigate, find and protect essential information is critical to research and development groups, clinicians, regulatory agencies, marketing teams, and those who benefit the most — customers.

Drug development requires information-intensive work. It behooves Pharmaceutical or Biotechnology companies to establish strong content management systems and processes throughout the drug development cycle. From the scientists leading the drug discovery process to the marketing specialists writing a new drug's labeling, all contributors need to document their activities for a variety of reasons. More importantly, they need the ability to create, manage, share, and collaborate on key information safely. Any delay caused by poor content management could affect overall time to market — especially critical in this fast-changing, regulatory environment with constant pressure to improve quality, safety, and global access.

A content infrastructure manages the creation, consumption and protection of the information that drives individual, team and enterprise productivity. For content infrastructure to deliver accurate, relevant and complete information, it is critical that the metadata describing the content is modeled, aggregated and distributed across the multiple content management systems deployed in the enterprise. Metadata management manages the creation, use and standardization of metadata to deliver high-integrity content *Findability*.

SchemaLogic is the leading provider of metadata management solutions for unstructured content. Metadata management enables findability by organizing the terms, definitions and relationships that describe content. Our solutions deliver high-integrity findability by ensuring that all content is readily found; is consumed in a relevant context; and is protected according to policy.

Manage/Define Metadata

About SchemaLogic, Inc.

Our software provides global companies a powerful and cost-effective approach to dealing with the overwhelming amount of information critical to doing business today. People from diverse groups must be able to access and share information across complex systems throughout their enterprise. In order to do this, descriptions, tags and categorizations of information must be accurate and consistent.

SchemaLogic is the leading provider of metadata management solutions for unstructured content. Metadata management enables findability by organizing the terms, definitions and relationships that describe content. Our solutions extend the value of content management by ensuring that all content is readily found; is consumed in a relevant context; and is protected according to policy. The Company has licensed software to some of the best-known and largest companies in the world, including Associated Press, Chevron, Corbis and Reed Business Information.
