

CREATING THE CONNECTION BETWEEN PEOPLE AND INFORMATION

ABOUT SCHEMALOGIC

SchemaLogic develops software that allows employees to find and share information more effectively while helping to improve corporate information governance, eDiscovery and regulatory compliance.

Our MetaPoint software integrates with Microsoft Office applications to tag and classify documents automatically as they are created. MetaPoint also suggests to the user where documents should be stored in Microsoft SharePoint and facilitates document filing, retrieval and retention management.

Our team includes the industry's top professionals in metadata management – including experts in taxonomy, business semantics, classification, tagging and others. SchemaLogic's Solution Methodology delivers proven methods and best practices to guide successful metadata management implementations that increase information work productivity and reduce eDiscovery and compliance risk. The knowledge and experience of SchemaLogic's technical team is consistently recognized as the hallmark of excellence by our customers.

SchemaLogic extends the business value of enterprise information for our global customers by ensuring that all content is readily found, is consumed in a relevant context, and is protected according to policy.

PRODUCTS

MetaPoint ensures consistent and accurate document tagging, classification and storage and helps employees find and share information more effectively while improving corporate information governance and regulatory compliance.

MetaPoint Desktop integrates with Microsoft Office applications to tag and classify documents automatically when they are created. MetaPoint also suggests to the user where documents should be stored on Microsoft Office SharePoint Server and facilitates document filing, retrieval, and document retention management.

Enterprises use **MetaPoint Server** to model and manage corporate vocabularies and SharePoint metadata structures and synchronize the metadata model to SharePoint sites and MetaPoint Desktops across the enterprise.

SchemaServer enables business subject matter experts and IT professionals to define and manage corporate taxonomies and ontology's. SchemaServer provides a powerful modeling environment to define and manage metadata models as they evolve and cross over business and departmental boundaries. Compliance monitoring and change management ensure that top-level mandates are followed and, at the same time, departmental, project, and system level needs are accommodated and made visible.

SchemaServer aligns taxonomies, vocabularies and metadata structures across multi- department Content Management Systems, Search Technologies, and other business applications in the enterprise, providing productized integrations with leading products such as **Microsoft SharePoint 2007, EMC Documentum Enterprise Content Server, and FAST ESP** to propagate and manage metadata, highlight compliance issues, and improve context in search results.
